

Hyphenation exception log

Barbara Beeton

This is the periodic update of the list of words that \TeX fails to hyphenate properly. The full list last appeared in *TUGboat* 16:1, starting on page 12, with updates in *TUGboat* 22:1/2, pp. 31–32; 23:3/4, pp. 247–248; 26:1, pp. 5–6; 29:2, p. 239, 31:3, p. 160, and 33:1, pp. 5–6. The full list is included here. Owing to the length of the list, it has been subdivided into two parts: English words, and names and non-English words (including transliterations from Cyrillic and other non-Latin scripts) that occur in English texts.

This list is specific to the hyphenation patterns that appear in the original `hyphen.tex`, that is, the patterns for U.S. English. Regarding patterns for other languages, see below, “Hyphenation for languages other than U.S. English”.

In the list below, the first column gives results from plain \TeX ’s `\showhyphens{...}`. The entries in the second column are suitable for inclusion in a `\hyphenation{...}` list.

In most instances, inflected forms are not shown for nouns and verbs; note that all forms must be specified in a `\hyphenation{...}` list if they occur in your document. See the section below on making this list machine-usable.

Thanks to all who have submitted entries to the list. Since some suggestions have demonstrated a lack of familiarity with the rules of the hyphenation algorithm, here is a short reminder of the relevant idiosyncrasies. Hyphens will not be inserted before the number of letters specified by `\lefthyphenmin`, nor after the number of letters specified by `\righthyphenmin`. For U.S. English, `\lefthyphenmin=2` and `\righthyphenmin=3`; thus no word shorter than five letters will be hyphenated. (For the details, see *The \TeX book*, page 454.) This particular rule is violated in some of the words listed; however, if a word is hyphenated correctly by \TeX except for “missing” hyphens at the beginning or end, it has not been included here.

Some other permissible hyphens have been omitted for reasons of style or clarity. While this is at least partly a matter of personal taste, an author should think of the reader when deciding whether or not to permit just one more break-point in some obscure or confusing word. There really are times when a bit of rewriting is preferable.

One other warning: Some words can be more than one part of speech, depending on context, and have different hyphenations; for example, ‘analyses’

can be either a verb or a plural noun. If such a word appears in this list, hyphens are shown only for the portions of the word that would be hyphenated in the same way regardless of usage. These words are marked with a ‘*’; additional hyphenation points, if needed in your document, should be inserted with discretionary hyphens.

Words added since the last appearance of the list are preceded by ‘+’.

The reference used to check these hyphenations is *Webster’s Third New International Dictionary*, unabridged.

Hyphenation for languages other than U.S. English

Patterns now exist for many languages other than U.S. English, including languages using accented and non-Latin alphabets. CTAN holds an extensive collection of patterns: see `language/hyphenation` and its subdirectories.

A group of volunteers led by Mojca Miklavec have created a comprehensive package of hyphenation patterns, called `hyph-utf8`; see <http://tug.org/tex-hyphen>.

Converting this list into machine-usable hyphenation exceptions

Werner Lemberg has created a script that will convert this article into a real `\hyphenation` block that can be incorporated into a document either directly or by inputting a file. His work has necessitated some changes to the macros used to format the list, but the appearance of the list will not change. Many inflected forms will be included automatically, some evident in the printed version, but many included silently.

The script, `hyphenex.sh`, is a straightforward shell script and is posted on CTAN, in

`tex-archive/info/digests/tugboat/hyphenex/`

The output of the script is posted in the same area as `ushypex.tex`.

The List — English words

academy(ies)	acad-e-my(ies)
ac-cusative	ac-cu-sa-tive
+ acronym	acro-nym
acry-lamide	acryl-amide
acry-lalde-hyde	acryl-alde-hyde
